DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Richek et al (U.S. 5,257,387) and Allen et al (U.S. 5,634,072).

As per claims 1,8,15 Richek disclosed a method for allocating system resources among groups having entitlement values and maximum limits comprising: allocating a computer system resource to active groups according to respective entitlement values; determining an excess entitlement allocated to inactive groups; and reallocating the excess entitlement to the active groups in proportion to the respective entitlement values (col. 2, lines 25-37).

However Richek did not disclose in detail without exceeding a maximum limit for each of the active groups, whereby each of the active groups has a maximal value representing the groups' total proportionate share of the system resource after the excess entitlement has been reallocated.

In the same field of endeavor Allen disclosed the installation is given the flexibility to determine a maximum value based on the customer environment since limiting the number of connections to coupling facility structure will lessen the amount of the space

Art Unit: 2141

used by the function data set. This value will be used to reserve total function data set for all coupling facility structures in the active policy and will be rounded to the next highest unit of 8 (col. 22, lines 51-58).

It would have been obvious to one having ordinary skill in the art at the time of the invention was made to have incorporated without exceeding a maximum limit for each of the active groups, whereby each of the active groups has a maximal value representing the groups' total proportionate share of the system resource after the excess entitlement has been reallocated as taught by Allen in the method of Richek to introduce management delays in related to Management of resource reuse and resource allocation.

3. As per claims 2,9 Richek-Allen disclosed wherein the maximal values for inactive groups is set equal to zero (Allen, col. 37, lines 27-36).

4. As per claims 3,16 Richek-Allen disclosed further comprising: calculating a scaling ratio for each group; and sorting active groups by their scaling ratios (Allen, col. 58, lines 53-67).

5. As per claims 4,10,17 Richek-Allen disclosed wherein the scaling ratio is a ratio between the maximum limit and the entitlement value (Allen, col. 58, lines 52-67).

6. As per claims 5,11,18 Richek-Allen disclosed wherein the step of reallocating comprises: determining whether unprocessed groups can scale by the scaling ratio of a current group without exhausting unallocated resources (Allen, col. 88, lines 35-47); and

Art Unit: 2141

if the unprocessed groups can scale without exhausting the unallocated resources, then setting the maximal value of the current group equal to the maximum limit of the current group (Allen, col. 37, lines 27-36).

7. As per claims 6,12,19 Richek-Allen disclosed wherein the step of reallocating further comprises: if the unprocessed groups cannot scale without exhausting the unallocated resources, then scaling the unprocessed groups by the unallocated resources (Allen, col. 27, lines 65-67 & col. 28, lines 1-7).

8. As per claims 7,13,20 Richek-Allen disclosed further comprising processing the groups individually as sorted by the scaling ratios (Allen, col. 58, lines 53-67), whereby the groups having a higher maximum limit relative to their entitlement values are processed after groups having a lower maximum limit relative to their entitlement values (Allen, col. 37, lines 27-36).

9. As per claim 14 Richek-Allen disclosed wherein the step of reallocating further comprises, if a portion of the excess entitlement remains unallocated after processing, all active groups, reallocating the portion to one or more active or inactive groups (Allen, col. 88, lines 35-47).

Conclusion

10. Any inquiry concerning this communication or earlier communication from the examiner should be directed to Adnan Mirza whose telephone number is (703)-305-4633.
